Question **1**Correct

Flag question

Given an array of numbers, find the index of the smallest array element (the pivot), for which the sums of all elements to the left and to the right are equal. The array may not be reordered.

Example

arr=[1,2,3,4,6]

- \cdot the sum of the first three elements, 1+2+3=6. The value of the last element is 6.
- · Using zero based indexing, arr[3]=4 is the pivot between the two subarrays.
- · The index of the pivot is 3.

Function Description

Complete the function balancedSum in the editor below.

balancedSum has the following parameter(s):

int arr[n]: an array of integers

Returns:

int: an integer representing the index of the pivot

Constraints

- $\cdot \qquad 3 \le n \le 10^5$
- \cdot 1 \leq arr[i] \leq 2 \times 10⁴, where 0 \leq i < n

```
Answer: (penalty regime: 0 %)

Question 2
Correct

Flag question
```

```
Calculate the sum of an array of integers.

Example

numbers = [3, 13, 4, 11, 9]

The sum is 3 + 13 + 4 + 11 + 9 = 40.

Function Description

Complete the function arraySum in the editor below.

arraySum has the following parameter(s):
int numbers[n]: an array of integers

Returns
int: integer sum of the numbers array

Constraints

1 \le n \le 10^4
1 \le \text{numbers}[i] \le 10^4
```

Answer: (penalty regime: 0 %)
